Pests or plenty? Sound, color, 16-mm., 13 minutes.

The story behind the farmer's need for safe, effective pest control techniques to produce the abundance and variety of food that the American family enjoys every day of every season. Scientific research has developed a wide variety of modern, safe, pest control techniques and tools—chemical biological, cultural, mechanical—with which we effectively protect our crops and livestock. This twentieth century revolution in agriculture has enabled us to produce food enough for ourselves and hungry millions abroad as well. TV cleared.
